

Bootstrap Server for Searching Content in a Distributed Application-Layer Network

Synopsis

For the bootstrap server running on denver.cs.colostate.edu at port 5000:

Testing

You can use netcat to test communication with the bootstrap server. Try the following from a unix/linux terminal.

```
$ nc -u denver.cs.colostate.edu 5000
```

Then issue register and unregister commands. e.g.:

```
0038 REG 129.82.230.150 57000 yourname
```

Failures/Bugs

Please report any failures or bugs to csu.ece658@gmail.com
